# Clovis Junior

## Senior Data Engineer · Security, Fraud & Machine Learning

Divinópolis, Brazil · open to remote · clovisr.junior.cr@gmail.com · +55 11 99136-9157 · linkedin.com/in/clóvis-junior · github.com/crovim · crovim.github.io

## SUMMARY

Senior Data Engineer with 5+ years building data pipelines, analytics platforms and machine-learning models across cybersecurity, fraud prevention, credit and healthcare. I design cloud data architectures on GCP and Databricks, ship production models for real-time fraud and authentication risk, and turn complex data into decisions for leadership. **40+ data projects delivered across four industries**, known for rigorous validation, read-only access to source systems and tools that run without manual effort.

## EXPERIENCE

**ViwSec — Data Engineer** Nov 2026 – Present

Allocated to Magalu Group · Information Security Governance (GRC and security partnerships)

- Own the analytics layer of the group's Information Security Governance, from ingestion to executive reporting.
- Led a security data diagnostic (13+ interviews across GRC, third parties, policies, blue team and DevSecOps) and a data strategy in five pillars, producing a multi-year portfolio of ranked initiatives.
- Built a role-based web platform (Apps Script + Google Sheets) that recalculates security-control attainment for 12 business units every morning, read-only on the source, with change history, projections and data-quality reconciliation; used weekly by ~30 people.

**MagaluPay — Senior Data Consultant (via Positivo S+)** Nov 2025 – Nov 2026

- Built and scaled the Data Intelligence function in Information Security, serving Vulnerability Management, Threat Intelligence, Edge Security, Security Performance & Maturity, Risk Management, Endpoint Monitoring and PCI audit data.
- Designed cloud data architecture and automated pipelines on GCP (Cloud Functions, Pub/Sub, Secret Manager, Cloud Storage, BigQuery), centralising and standardising data from multiple security tools.
- Built a tiered vulnerability-reduction target model and backlog projection, validated against an independent reference implementation (10,000+ cell comparisons, zero discrepancies).
- Delivered executive dashboards and recurring CISO-level reporting with Python, SQL, Apps Script and Gemini, consumed in Looker Studio.

**Experian (Serasa Experian) — Senior Data Intelligence Analyst / Data Consultant (via Maitha Tech)** May 2024 – Nov 2025

- Led ML-driven anomaly detection for Pix instant payments, enabling large-scale fraud prevention under Central Bank (BACEN) compliance.
- Developed real-time authentication and credit-risk scoring models from behavioural data and integrated them into production antifraud operations.
- Built the SecOps Data Intelligence vertical across brand monitoring and multi-layer vulnerability management.
- Designed and maintained pipelines and SQL/Databricks models (Python, PySpark) for fraud detection and compliance reporting; implemented data governance and audit documentation.

**Dasa — Senior Data Analyst / Management Analyst** Feb 2021 – May 2024

- Implemented and ran an OKR framework for 50,000+ employees.
- Built a nationwide arbovirus monitoring solution for Brazil and led the data interface with Clinical Research, improving study recruitment through patient identification via data matching.
- Built ETL pipelines (SQL, Python, BigQuery) and executive dashboards (Power BI, Tableau); structured a data monetisation model.

## SELECTED PERSONAL PROJECTS · CROVIM.GITHUB.IO

- **ClimateHealth Divinópolis** — public-data platform (RAW→GOLD, 10 official sources, lineage per field) linking weather and territory to hospital demand; distributed-lag model found +21% death risk in the five days after extreme-heat days (95% CI 10–33%).
- **NFL Big Data Bowl 2027** — frame-level tracking analytics (10 Hz) measuring receiver separation at ball arrival. **Football recruitment hub** — position-aware shortlists from per-90 percentiles.

## SKILLS

| | |
|---|---|
| **Data engineering** | Python, SQL (advanced), PySpark, Databricks, BigQuery, Cloud Functions, Pub/Sub, Cloud Storage, Secret Manager, Apps Script, Git |
| **Machine learning** | scikit-learn, gradient boosting (XGBoost, LightGBM), anomaly detection, statsmodels, model monitoring |
| **Analytics & BI** | Dimensional modelling, semantic layers, Looker / Looker Studio, Power BI (DAX), Tableau |
| **Languages** | Portuguese (native) · English (professional working proficiency) |
| **Governance** | Data quality testing, lineage, documentation, audit readiness · NIST CSF, ISO 27001, PCI-DSS, LGPD, BACEN |

## EDUCATION & CERTIFICATIONS

**Postgraduate, Machine Learning Engineering** — Data Science Academy · 2025 – 2027 (in progress)

**B.Sc. Biomedical Engineering** — Federal University of Uberlândia (UFU) · 2017 – 2022

Google Cloud Big Data & ML Fundamentals · Databricks Lakehouse Fundamentals · Microsoft Power BI for Data Science · Atlassian Confluence for Project Managers
